## Bremick Values

### **Trust**

We take pride in the quality of our products and services through design, development, manufacturing, quality systems, logistics and after sales service to our extensive network of authorised distributors.

### **Innovation**

Bremick product development teams are continually monitoring industry trends and end user needs resulting in a constant flow of innovation, bringing real value to consumers and distributors alike.

### **Quality**

Our quality systems ensure strict conformance to national and international standards through rigorous test and inspection procedures of stud materials throughout our manufacturing processes at the purpose built Bremick NATA Accredited laboratory in Sydney. In addition verification testing of our stud bolt materials is undertaken at independent 3rd party NATA testing laboratories.

### **Reliability**

Bremick has been the leading Australian fastener supplier for over 50 years with 11 factory warehouses across the Pacific Region, all of which are linked by a centralised computer system, ensuring efficient service and on time delivery to all of our valued customers.

**Application:** For direct-tension indication tightening of Bremick Fasteners

**High Strength Structural Bolts (AS1252).**

Structural Load Indicating Washers are designed for use with Bremick high strength structural bolts and provide a simple and accurate aid to tightening and inspection. The washers provide a direct indication of correct installed bolt tension which complies with AS4100.

Figure 1

The Load Indicating Washers are special hardened washers carrying 4 to 7 protrusions, depending on bolt diameter (Figure 1) and these are assembled with the protrusions bearing against the underside of the bolt head, leaving a gap. The nut is then tightened until the protrusions are flattened and the gap reduced to that shown in Table 1. Refer to Figure 2 for an example of before and after tightening. Note that the bolt head must remain stationary during tightening.

# INSTALLATION USING STRUCTURAL LOAD INDICATING WASHERS (AKA CORONET LOAD INDICATORS)

The induced bolt tension at this average gap will be not less than the minimum specified tension in Table 2.

In applications where the bolt head is not visible for inspection or it is necessary to rotate the bolt head rather than the nut in tightening, the Load Indicating Washer can be fitted under the nut using an extra hard flat round washer under the nut and protrusions bear against this washer (Figure 3).

Figure 2

Figure 3

## INSTALLATION USING STRUCTURAL LOAD INDICATING WASHERS (AKA CORONET LOAD INDICATORS)

In tightening with Load Indicating Washers it is still required that this tightening be carried out in two stages. First stage involves a preliminary tightening to a “snug fit” condition. The object of this preliminary tightening is to draw the mating surfaces into firm contact. The use of drift pins is also recommended to maintain hole alignment.

On large joints take a second run to ensure that all bolts are “snug fit”. Carry out final tightening by reducing gap between bolt head and load indicator to 0.40mm or less. A feeler gauge of the specified thickness is used as an inspection tool, however experienced operators will judge the gap by eye. Final tightening should begin at the most rigid part of the connection towards the free edges to minimise any subsequent relaxation of previously tightened fasteners.

If the gap is closed completely, over-tightening has occurred, but should not be detrimental to 8.8/TF and 8.8/TB assemblies.

In the event that the gap does not close evenly, the average gap should be estimated, and should conform with the specified dimension (Figure 4).

When gap is not uniform, the average gap should be measured midway between the maximum and minimum gaps with feeler gauge.

If feeler gauge does not enter gap at this point, bolt is properly tightened.

Figure 4

**Important:** A nut should not be slacked after fully tightening with a Load Indicating Washer. If this is necessary, fit a new Load Indicating Washer for the second tightening.

## INSTALLATION USING STRUCTURAL LOAD INDICATING WASHERS (AKA CORONET LOAD INDICATORS)

Table 1

Load Indicator gaps to give required minimum shank tension

Position of Load Indicating Washer	Gap (mm)
Under bolt head, black finish bolts	0.4
Under bolt head, hot dip galvanised bolts	0.25
Under nut, with hardened washer, all finishes	0.25

# SUMMARY OF TRADING TERMS

**A full set of our current conditions is available on request**

## Payment/Credits

Our trading terms are 30 days from statement date.  
Consignment stock is not available.

Returns for credit are subject to prior approval and allocation of an acceptance number, without which our warehouse is directed not to receive them. Receipt of goods in this way does not imply agreement to issue a credit note.

Approval of credit can only be considered if the request for credit in writing is received (within 14 days of receipt of goods) showing the credit acceptance number, original invoice number, date and reason for return.

No freight charges for return of goods shall be accepted unless authorised by Bremick.

Products which have been reworked, specially manufactured or zinc plated cannot be returned.

## Romalpa Clause

1. Notwithstanding anything in these Conditions of Sale contained, expressed or implied or incorporated herein by reference and notwithstanding any rule of law or equity to the contrary and notwithstanding any course of dealing between the Company and the Purchaser, property in goods shall not pass from the Company to the Purchaser unless and until –
  - (a) Such goods have been delivered in accordance with these conditions and
  - (b) The Purchaser shall have made payment in full for such goods ("the goods") and

(c) The Purchaser shall have fully discharged all their indebtedness and other liability (if any) of the Purchaser to the Company on whatsoever account. The Purchaser shall, notwithstanding the foregoing, be empowered as the agent of the Company to sell the goods and shall hold the proceeds of such sale upon trust to apply the same, firstly in payment or otherwise discharging the payable to the Company for such goods and any other costs of carriage or insurance or other costs or expenses borne by the Company in respect thereof; secondly, in paying or otherwise discharging all the other indebtedness or liability (if any) of the Purchaser to the Company on whatsoever account, which is outstanding at the date that the Purchaser receives such proceeds of sale; thirdly, as to any balance, for the Purchaser's own use and benefit. Pending the passing of title to the goods the Company may require the Purchaser to mark the goods as being the property of the Company.
