Who are we?

Gorilla manufactures the highest quality products available, representing outstanding value across a broad range of applications.

Gorilla ladders are manufactured in the largest ladder manufacturing plant in the world, to Australian & New Zealand Standards. All Gorilla research and development is conducted in Australia, with designs tested and modified in Australia & New Zealand.

Gorilla manufactures a range of patented products, including the Gorilla Stabiliser and Gorilla Brace which can increase ladder safety. Unique products such as the telescoping aluminium plank and Gorilla Bumpers are all part of the dynamic range that Gorilla is proud to bring to market.

Images used across the catalogue may differ from actual product due to changes in specification which occur from time to time. Ladder specifications are believed to be correct at time of printing and subject to change without notice.

Product Features

Top Cap Organiser

On Aluminium and Industrial Fibreglass single sided ladders.

Anti-Slip Treads

Minimises slipping. Featured on all Gorilla ladder designs.

Resin Bracing System

Patented resin brace on Industrial 150kg models 1.8m (6ft) and over (excludes extension ladders).

Roll Locked D-Shaped Rungs

Featured on Industrial extension ladders for added strength and durability.

Stabiliser Mounting

Factory produced mounting holes allow for easy fitting of stabiliser. Mounting holes on most Gorilla ladders 1.8m and over.

Internal Spreader

Packs away to prevent fouling.

Non-Slip Heavy Duty Platform

Large non-slip platform surface for added safety when working at heights. Platform featured on Gorilla platform ladders.

Handrail

Heavy duty aluminium handrail fitted to all Gorilla platform ladders (positioned 900mm from platform). Accessories available.

Choosing your ladder

Step Ladder

Choose a ladder 0.6m shorter than the height you wish to reach

Some examples:

Height to reach	Ladder height
1.8m	1.2m ladder
2.4m	1.8m ladder
3.0m	2.4m ladder

Extension Ladder

Choose a ladder 1.0m longer than the height you wish to reach

Some Examples:

Height to reach	Ladder height
2.4m	3.4m ladder min
3.7m	4.7m ladder min
5.0m	6.0m ladder min

Aluminium or Fibreglass?

As a general rule, fibreglass ladders are recommended and in most cases mandatory when working in an electrical environment. A fibreglass ladder provides isolation between the user and earth, reducing (but not eliminating) the risk of electrocution.

Aluminium ladders provide little electrical isolation for users, and are therefore not recommended for use in electrical environments.

Aluminium ladders are lighter than fibreglass, and are perfect for use in all non-electrical environments.

Safe use of your ladder

ALWAYS inspect your ladder for damage prior to use – **DO NOT** use any ladder which is damaged.

ALWAYS be aware of your environment before setting up – check for hazards such as power cables, moving vehicles and doors.

ALWAYS wear appropriate, fully-enclosed footwear.

ALWAYS face the ladder when ascending/descending.

ALWAYS read ALL instructions present on ladder before use.

NEVER leave your ladder unattended – children may ascend and fall.

Step Ladders

ALWAYS use in the fully open position, with spreader mechanisms engaged.

NEVER stand on the top step.

ALWAYS keep body centred within the stiles of the ladder.

ALWAYS ensure ladder is positioned with all feet in contact with the ground and the surface is firm and level.

Extension Ladders

ALWAYS extend top of ladder >1.0m beyond the top support point.

ALWAYS lean your ladder at an angle of 1:4 – for each 4m your ladder is extended, it should be 1.0m out from the top support point.

ALWAYS ensure that the ladder feet and top support point are secure and cannot slip.

Accessories

ALWAYS read and follow usage directions.

Fibreglass Care

Over time and with use, fibreglass may deteriorate to a point where fibres come loose. This issue can be addressed by applying a coating of polyurethane or acrylic lacquer over loose fibres.
